Workshop Agenda

Save the Blue Five | Santa Cruz, Galápagos | June 8-12, 2026

Day 1 - Arrival

Santa Cruz, Galápagos, Ecuador
June 8, 2026

- 5:00 - 5:30 pm: Transfer from the airport to Santa Cruz Island. Transportation coordinated by Isaac and Dylan.
- 6:00 pm: Hotel check-in. Depending on your room assignment, please check your email for hotel instructions. Address: TBD.
- 7:30 - 9:00 pm: Dinner and workshop objectives. Location: TBD.

Day 2 - Scientific Progress and Modeling Integration

Tuesday, June 9, 2026

Objective

Consolidate scientific and modeling progress since the 2025 workshop, assess readiness for climate projections, and identify key gaps to advance the project.

Session 1: Welcome and framing of progress since 2025

09.00 - 10.30

- Opening remarks. Isaac Brito-Morales and Lee Hannah. Brief welcome and overview of the workshop goals and expected outcomes.
- Participant introductions. Short introductions to align expertise across participants and ongoing contributions to the project.
- Overview of progress since the 2025 workshop.
- Key achievements. Summary of major milestones reached across data, modeling, and coordination efforts.
- Current status of the project. Where we stand today across workstreams and collaborations.
- Goals for Day 2. Framing the focus on scientific integration and modeling readiness.

Coffee break: 10.30 - 11.00

Session 2: Scientific and modeling advances since 2025

11.00 - 13.00

This session presents key advances in data, modeling, and climate assessments across the project.

- Climate change vulnerability assessment. Lee Hannah, presented by Sarayu Ramnath. Overview of the assessment framework, datasets, and initial results across taxa.
- Status of biological data for species distribution modeling (SDMs). Isaac Brito-Morales and Sarayu Ramnath. Current state of compiled datasets, data gaps, and readiness for modeling.
- Physical modeling and downscaling framework. Isaac Brito-Morales, including outcomes from Toulouse 2025. Summary of oceanographic datasets, downscaling approaches, and integration with biological data.
- Species modeling updates. Dolphins: Mario Pardo and Ariadna Juarez. Mesopelagic systems: Yulia Egorova. First generation of SDMs: Isaac Brito-Morales.

Lunch break: 13.00 - 14.30

Session 3: Synthesis across taxa and systems

14.30 - 16.00

This session integrates insights across species, models, and environmental drivers to build a regional perspective.

- Cross-taxa patterns and emerging insights.
- Key environmental drivers and habitat use.
- Integration of biological and physical processes.
- Discussion: What are we learning at the regional scale? Where are the main knowledge gaps? What limits our current ability to move toward projections?

Coffee break: 16.00 - 16.30

Session 4: Strategic discussion and next steps

16.30 - 17.00

- Priority gaps to address.
- Short-term actions and next steps.
- Alignment across teams and workstreams.
- Preparation for upcoming project milestones.

Day 3 - From Models to Decisions: Bridging Science and Regional Needs

Wednesday, June 10, 2026

Objective

Translate scientific and modeling progress into concrete next steps, aligning technical development with regional priorities and decision-making needs.

Session 3: Working Groups - Technical Development and Regional Priorities

09.00 - 12.30

This session is structured around parallel working groups, bringing together participants to focus on complementary aspects of the project and define priorities for the next phase.

- 09:00 - 09:30: Introduction and framing of the working groups. Overview of objectives for the session, explanation of group structure and expected outcomes, and key questions to guide discussions.
- 09:30 - 10:45: Parallel working groups. Technical group: modeling development, climate scenarios, data integration, and defining what is realistically achievable in the next phase of the project. Stakeholder Engagement and Regional Priorities group: regional needs, policy relevance, expected outputs, and how results can support decision-making across institutions.

Coffee break: 10.45 - 11.00

Session 3 (cont.): Plenary Synthesis - Aligning Technical Capacity and Regional Needs

11.00 - 12.00

- Technical group: What we can do. Feasible modeling approaches, selected climate scenarios, data readiness, and key constraints.
- Stakeholder Engagement and Regional Priorities group: What we need. Priority outputs, regional needs, and expectations from a policy and implementation perspective.
- Discussion: Where do technical capabilities meet stakeholder needs? Where are the main gaps or mismatches? What adjustments are needed to move forward effectively?

Session 4: Discussion and agreement on next steps

12.00 - 12.30

- Identification of priority actions.
- Alignment across teams and workstreams.
- Definition of short-term deliverables.

Lunch break: 12.30 - 14.30

Afternoon social activity and networking

- 14:30 - 17:30: Outdoor activity, snorkeling or local site visit. Designed to encourage informal exchange, strengthen connections among participants, and experience the local environment.
- 19:00 - 21:00: Group dinner, location to be confirmed.

Day 4 - Applied Science, Synthesis, and Next Steps

Thursday, June 11, 2026

Objective

Bring together the main outcomes from the workshop, translate them into concrete outputs, and define a clear path forward for collaboration and regional impact.

Session 5: Synthesis of key insights and applied perspectives

09.00 - 10.30

- Focus: connect the scientific and modeling work from Day 2 with the alignment discussions from Day 3, with a focus on how these results can inform conservation and regional planning.
- Discussion topics: from modeling to application; relevance for regional planning; handling uncertainty; cross-taxa insights; regional coordination.
- Expected outcome: a shared view of how workshop results translate into applied conservation and regional priorities.

Coffee break: 10.30 - 11.00

Session 6: Defining outputs and next steps

11.00 - 12.30

- Focus: move from discussion to definition. Identify the key products coming out of the workshop and what is needed to deliver them.
- Outputs to define: scientific outputs such as papers, datasets, and modeling workflows; applied outputs such as maps, policy-relevant products, and regional inputs.
- For each output, define lead, contributors, and timeline.
- Timeline discussion: short-term 0–3 months, medium-term 3–6 months, and long-term 6–12 months.
- Guiding question: What are we actually committing to after this workshop?
- Expected outcome: clear outputs with identified leads and realistic timelines.

Lunch break: 12.30 - 14.00

Session 7: Roadmap and coordination

14.00 - 16.00

- Focus: define how the work continues beyond the workshop.
- Key points: priority actions for the next months, coordination across teams and institutions, how to maintain momentum, and how outputs connect to regional and global processes.

- Expected outcome: a simple, shared roadmap for the next phase of the project.

Final discussion and closing

16.00 - 16.30

- Final reflections.
- Confirmation of next steps.
- Closing remarks by Isaac, Lee, and the CI team.
- Evening: group dinner.

Day 5 - Departure

Departure and travel arrangements.
